

Aerial Work Platform Operator Training

Our curriculum is designed for individuals who work from, or operate, boom lifts, scissor lifts and/or push-around equipment. This course covers all the safety aspects regarding AWP's, pre- and post-use checks, regulations, fall protection and general use. The course format includes a combination of presentation, question and answer, exam and practical application.

Forklift Operator Training

This training provides operators with practical lift truck knowledge and enough hands on experience to develop a basic skill level required to operate their forklift in an approved and acceptable manner. We cover OSHA standard 1910.178 regulations, including lift truck operation, pre-operation inspection of the lift truck and work area, fueling procedures and load handling. By the end of this course, students will be able to demonstrate practical lift truck operation skills within the guidelines established by OSHA to receive a certificate of training completion.

\$50 per Attendee
on Trainings held at our facility.

Open Group Trainings are held monthly on the 2nd Tuesday of the month. The registration deadline is the Friday before.

Each training is a two-part program including approximately one hour of classroom training and separate practical application and testing.

Participants completing the exam and practical application will receive a certificate of completion and pocket card from CPR Services, certifying completion of Training.
